        <h3>
            According to the World Health Organization (WHO), cardiovascular diseases (CVDs) are the number one
            cause of death
            today. Over 17.7 million people died from CVDs in the year 2017 all over the world which is about
            31% of all deaths, and
            over 75% of these deaths occur in low and middle-income countries. Arrhythmia is a representative
            type of CVD that
```

refers to any irregular change from the normal heart rhythms. There are several types of arrhythmia

including atrial

fibrillation, premature contraction, ventricular fibrillation, and tachycardia. Although a single

arrhythmia heartbeat

may not have a serious impact on life, continuous arrhythmia beats can result in fatal

circumstances.

```

                <h1>
                    Premature Ventricular Contractions
                </h1>
                <p>Extra, abnorma heartbeats that begininone of the
                    Heart's two lower chambers.</p>
                <p>Premature ventricular contractions (PVCs) occur
                    in most people at some point. Causes may include certain
                    medication, alcohol, some illegal drugs, caffeine,
                    tobacco, excercise or anxiety.</p>
                <p>
                    PVCs often cause no symtoms. When symptoms do
                    occur, they feel like a flip-flop or skipped-beat
                    sensation in the chest.
                </p>
                <p>Most people with isolated PVCs and an otherwise
                    normal heart don't need treatment. PVCs occurring
                    continuously serious cardiac than 30 seconds is a
                    potentially serious cardiac condition known as
```

```html
        ventriclular tachycardia.</p>
      </div>
      <div class="bannerImg" data-aos="fade-up" data-aous-duration="1000">
        <img src="static/images/PVC.jpg" alt="" />
      </div>
    </div>
    <div class="banner">
      <div class="bannerText" data-aos="fade-right" data-aous-duration="1000">
        <h1>
          Right Bundle Branch
        </h1>
        <p>Right bundle branch block is associated with
          structural changes from strech or ischemia to
          the myocardium. It can also occur
          iatorgenically from certain common cardiac
          precedures, such as right heart catheterization.</p>
        <p>Although there is no significant association
          with cardiovascular risk factors, the presence
          with cardiovascular risk factors, the presence
          of a right bundle branch block is a predictor of
          mortality in myocardial infarction, heart
          failure, and certain heart blocks.</p>
        <p>In asymptomatic patients, isolated right bundle
          brach block typically does not need further
          evaluation.</p>
```

```html
          </div>

Left Bundle Branch

A delay blockage of electrical impulses to the left of the heart. Left bundle brach block sometimes makes it harder for the heart to pump blood efficiently through the circulatory system.

Most people don't have symptoms. If symtoms occur, they inlcude fainting or a slow heart rate.

If there's an underlying condition, such as heart disease, that condition needs treatment. In patients with heart failure, a pacemaker can also relieve symptoms as well as prevent death.

Life Care

Home   info   About Us   Contact Us   Predict

Normal

Note that the heart is beating in a regular sinus rhythm between 60-100 beats per minute (specifically 82 bpm).

All the important intervals on this recording are within normal ranges.

The normal ECG patterns seen in children differ considerably from those in adults.

        <h1>

          We are a team of

          <span    style="color:    #e0501b;    font-size:    4vw">Arrthymia
Prediction</span>

        </h1>

        <h3>

          In   this   project,   we   build   an   effective   electrocardiogram   (ECG)
arrhythmia classification method

          using a convolutional

          neural   network   (CNN),   in   which   we   classify   ECG   into   seven
categories, one being normal and the other

          six being different

          types of arrhythmia using deep two-dimensional CNN with grayscale
ECG images. We are creating a web

          application where

          the user selects the image which is to be classified. The image is fed
into the model that is

          trained and the cited

          class will be displayed on the webpage.

        </h3>
